It is our greatest pleasure to host the International Congress of Comparative Physiology and Biochemistry 2011 (ICCPB2011). The ICCPB has been held successfully every 4 years since 1983, covering a wide area of animal physiology and emphasizing how animals have adapted to a variety of environments, thus forming a scientific basis for the preservation of biodiversity.

The City of Nagoya is keen on the preservation of biodiversity. As the host city of the World Exposition "Love the Earth" in 2005, and of the COP10 meeting of the Convention on Biological Diversity (CBD) in 2010, Nagoya is an ideal venue for ICCPB 2011 with the theme "Physiological Basis of Biodiversity." There are many other reason to visit Nagoya. It is the third largest metropolitan region, conveniently located between Tokyo and Kyoto; a medieval castle city with traditional industries like ceramics and textiles, as well as modern ones including automobiles (Toyota) and machine tools. You can enjoy both sciences and our culture in Nagoya. We are looking forward to seeing you in Nagoya in 2011 .....
